

Safe Manual Handling of Gas Cylinders

This half-day Instructor-led workshop is designed for stores personnel and staff in similar roles who do not use gas directly themselves

Benefits

- Training delivered by highly skilled, industry trained, experienced course directors
- Efficiently ensure that staff are trained in all aspects of manual handling of gas cylinders
- Cost effective on-site training
- Staff are made aware of the hazards so they can identify risks and adopt safe working practices

Workshop overview

- Manual Handling Operations Regulations 2002
- Risk assessments and the need for Standard Operating Procedures
- Gas cylinder design and identification
- Hazards posed by pressure
- The need for personal protective equipment and appropriate equipment for safe manual handling of gas cylinders
- How the back works and types of injury
- Manual handling activities – lift, lower. Push, pull, twist, supporting and transporting
- Lifting techniques and mechanical aids
- Practical session

Workshop price

Safe Manual Handling of Gas Cylinders (3½ hours)

£980 for up to 8 delegates, additional delegates £95 per head up to a maximum of 12 delegates. VAT is payable at the standard rate.

Please note it is essential that all delegates have completed the relevant Safety Awareness Workshop before attending this practical workshop

Who should attend?

- Anyone handling or storing gases on site
- Production and other managers with operational responsibilities for safety
- Managers, supervisors and staff, from all functions who are responsible for the safe use of gases within their department
- Anyone responsible for health and safety

What you will learn

The workshop will enable participants to:

- Correctly identify gas cylinders
- Identify potential hazards, risks and the properties of various gases
- Recognise the need for appropriate Personal Protective Equipment (PPE)
- Appreciate the need to store gas cylinders correctly
- Recognise the need to use correct manual handling aids
- Safely 'milk-churn' a gas cylinder
- Identify key dangers when trying to lift a cylinder

All delegates must be provided with, and wear, appropriate PPE during this practical workshop i.e eye protection, safety shoes and safety gloves

gas safety training brought to you in association with Gas Safe

Next step...do you have employees who use gases?

All individuals who use gases will require additional training with regard to the safe use of gases.

Visit our website to see our full range of Instructor-led and on-line safety awareness and practical workshops.

Specific e-Learning packages

What training modules are available?

- Using Liquid Nitrogen Safely
- Using Oxy-fuel Gases Safely
- Using Compressed Cylinder Gases Safely (non oxy-fuel)
- Using Medical Gas Cylinders Safely
(available Including or excluding Cylinder Storage & Manifold Systems)

e-Learning offers a more flexible, accessible method of training which delivers high quality affordable training without the need to gather employees together in a classroom. This method is ideal for single users, new starters or as refresher training.
